NCRMP USVI 2019 Fish**

Item Identification

*Dataset Title	National Coral Reef Monitoring Program: Assessment of coral reef fish communities in the U.S. Virgin Islands from 2019-06-02 to 2019-08-09
Short Title	NCRMP USVI 2019 Fish
*Status <i>Complete, In Work, Planned</i>	Complete
*Abstract <i>Dataset description</i> ● <i>Parameters included</i> ● <i>Scientific keywords</i>	<p>The National Coral Reef Monitoring Program (NCRMP) assessed coral reef fish communities in St. Croix, St. Thomas, and St. John, U.S. Virgin Islands using the stationary point count method (7.5m radius cylinder).</p> <p>This method collects and reports information on species composition, density, size structure, abundance and derived metrics (e.g., species richness, diversity). Data are collected using a 2-stage, stratified random survey design in hardbottom and coral reef habitats less than 30m in depth.</p> <p>Data provided in this dataset are from St. Croix, St. Thomas, and St. John, and surrounding Sail Rock and mid-shelf reef region. Lead agencies involved include the National Oceanic and Atmospheric Administration's (NOAA) National Centers for Coastal Ocean Science (NCCOS), NOAA Southeast Fisheries Science Center (SEFSC) and the National Park Service (NPS).</p>
*Purpose <i>Project overview</i> ● <i>Partnerships</i> ● <i>Dataset purpose</i>	The National Coral Reef Monitoring Program (NCRMP) details a long-term approach to provide an ecosystem perspective via monitoring climate, fish, benthic, and socioeconomic variables in a consistent and integrated manner. The NCRMP is intended to coordinate various Coral Reef Conservation Program (CRCP) biological, physical, and human dimensions activities into a cohesive NOAA-wide effort. Through the implementation of the NCRMP, NOAA will be able to clearly and concisely communicate results of national-scale monitoring to national, state, and territorial policy makers, resource managers, and the public on a periodic basis.
Cited Publications	[blank]
Supplemental Information ● <i>Collaborators</i> ● <i>Partner Entities</i> ● <i>Base Funding</i> ● <i>NCCOS Project</i> ● <i>Additional Funding</i> ● <i>Additional Projects</i>	The National Coral Reef Monitoring Program (NCRMP) is a framework for conducting sustained observations of biological, climate, and socioeconomic indicators at 10 priority coral reefs across the U.S. and its territories. This integrated approach will consolidate monitoring of coral reefs under a uniform method in the Pacific, Atlantic, Caribbean, and the Gulf of Mexico for the first time. NCRMP is funded by the NOAA Coral Reef Conservation Program (CRCP) under CRCP Project #743 "National Coral Reef Monitoring Plan (NCRMP) Implementation," and supported by NOAA's National Centers for Coastal Ocean Science (NCCOS) under NCCOS Project #180 "National Coral Reef Monitoring Program Implementation: Biological and Socioeconomic Monitoring" and NOAA Southeast Fisheries Science Center (SEFSC). These biological monitoring missions gather data on coral reef benthic and fish communities in the U.S. Caribbean, Florida, and the Gulf of Mexico. Each year, NOAA scientists work closely with CRCP and local partners to collect biological data from strategically selected sites. We then develop products that give fellow scientists, managers, decision makers and the public a better understanding of a region's resources and how they are changing over time. The biological component of NCRMP provides a biennial ecological characterization at a broad spatial scale of general reef condition for reef fishes, corals and benthic habitat (i.e., fish species composition/density/size, benthic cover, and coral density/size/condition). Data collection occurs at stratified random sites where the sampling domain for each region is partitioned by habitat type and depth, sub-regional location (e.g., along-shelf position) and management zone.

Entity Attribute Overview	<p>Three datasets are provided under the stationary point count fish protocols and are distributed as one compiled package: (1) Analysis Ready dataset, (2) Boatlog/Station dataset, and (3) raw QAQC'd sample data file. The methodology used for this survey can be found in the point count fish protocols.</p> <p>All three datasets contain data fields on general station information (survey strata, depth, rugosity). Each of these data tables contain additional survey-specific data fields. For complete information and</p>

Data Quality

*Completeness Report	[blank]
Quality Control Procedures Employed	<p>Quality control procedures are implemented in four main stages: (1) ongoing routine training of observers (initial detailed training, annual refresher training); (2) data check following data collection, where divers trade datasheets immediately upon returning to boat after dive, to ensure all data were collected accurately and required information is complete; (3) independent reviewers compare datasheets with database entries; and (4) statistical analyses are conducted as the final check before distribution.</p> <p>Before implementation the sampling design was reviewed and agreed upon by representatives from program partners, as well as NCCOS scientists.</p>

Lineage

*Lineage Statement	Datasets and protocols are year specific. Datasets are based on year-specific protocols utilized for data collection.
*Source	<p>Title: Sampling Design Protocol for the U.S. Caribbean and Flower Garden Banks National Marine Sanctuary (2016)</p> <p>Originator: National Centers for Coastal Ocean Science (NCCOS)</p> <p>URL: https://coastalscience.noaa.gov/project/national-coral-reef-monitoring-program-biological-socioeconomic/</p>
Additional Source	<p>Title: Reef Visual Census (RVC) Survey Protocol for the U.S. Caribbean and Flower Garden Banks National Marine Sanctuary (2017)</p> <p>Originator: National Centers for Coastal Ocean Science (NCCOS)</p> <p>URL: https://coastalscience.noaa.gov/project/national-coral-reef-monitoring-program-biological-socioeconomic/</p>
*Process Step	<p>Number: 1</p> <p>Description:</p> <p>2017 RVC survey locations were selected using a stratified random sampling design within the USVI study area for St. Croix, St. Thomas and St. John. Locations selected for coral demographic surveys are a subset of fish and benthic assessment survey sites. Detailed information describing the sampling design is provided in the NCRMP Sample Frame Generation Protocols and Workflow document.</p> <p>Briefly, surveys were located on shallow-water coral reefs and hardbottom habitats to a depth of 30 meters. Survey site selection was stratified according to depth classes, benthic habitat types, large</p>

	<p>marine biotopes and administrative zones. Samples were allocated disproportionate to area and consequently sampling weights are an integral component of data analysis. Variables addressing the sampling design process such as stratum documentation and sampling weights are provided in all data tables as survey attributes</p> <p>Data provided from this process are provided in all data tables as station information in addition to a main survey attribute table (sample strata, sampling weights).</p> <p>Refer to data dictionary for complete listing of terms and descriptions.</p> <p>Process Date/Time: [blank]</p> <p>Process Contact: National Centers for Coastal Ocean Science</p> <p>Citation: Sampling Design Protocol for the U.S. Caribbean and Flower Garden Banks National Marine Sanctuary (2016)</p>
Additional Process Step	<p>Number: 2</p> <p>Description: 2017 Stationary Point Count:</p> <p>The Stationary Point Count component of the protocols were modified in 2016 to integrate with similar methods used in Florida, another NCRMP sampling location. These changes were instituted in USVI in 2017 and are reflected in the 2017 USVI data sets. The Stationary Point Count data collection provides information on fish species collects and reports information on species composition, density, size structure, abundance and derived metrics (e.g., species richness, diversity) and of overall species diversity in a stratified random sampling design in hardbottom and coral reef habitats in the U.S. Caribbean and FGBNMS.</p> <p>Stationary point count surveys were conducted at all sample locations and co-located with a subset of Coral Demographic and Benthic Assessment surveys.</p> <p>Process Date/Time: [blank]</p> <p>Process Contact: National Centers for Coastal Ocean Science</p> <p>Citation: Reef Visual Census (RVC) Survey Protocol for the U.S. Caribbean and Flower Garden Banks National Marine Sanctuary (2017)</p>
