Additional Information

Suggested QC flag from Data Provider: NA
Additional Comments: The analytical system operated well during the cruise; however, there were three time intervals when the ship's sensors were not recorded. To replace the missing SST measurements, 0.36 degree C was subtracted from the equilibrator temperature. For the rest of the cruise, the average difference between the equilibrator and SBE-38 temperatures was 0.36 (+/-0.07) degree Celsius, n=7500. To replace the missing atmospheric pressure measurements, 0.72 mbar was subtracted from the LICOR pressure. For the rest of the cruise, the average difference between the LICOR and atmospheric pressures was 0.72 (+/-0.10) mbar, n=7550. The missing salinity measurements were estimated from adjacent good measurements.
