SUBJECT: Error Correction in Processing of Data Set - Accession # 82000 49

- 1) File Type: 124
- 2) Project Ident.: OCSEAP
- 3) Track Nos.: TR 8005 - TR 8020

I. Error Corrections as reported to Principal Investigator:

Error

Correction Completed (Check)

II. Additional error corrections:

Error

Correction Completed (Check)

See attached

III. Processor Name: M. Lewis

1. Taxonomic Codes
TR8005 - codes 841T000, 84110/000 deleted
2. TR8006, station no. 4G34 changed to 4G33 to agree with master and other detail records
3. TR8007, [ⓐ] sta. 4G71; entered record type E, moved station no.; deleted decimal in col. 34.
- ⓐ. Sta. 4G72 - changed (0) to zero.
4. Deleted Stations (no data)
TR8007 - 4G80
TR8009 - 4C55
TR8020 - 4C55
5. Corrected station numbers when part of number omitted (example) - 504L1 and followed by 504L1 within same station
6. Some track numbers mixed up - changed to agree with tracks within station number. (see prelim. check).
7. TR8015, sta. 9L2, year changed from 38 to 78.
8. TR8020, sta. 9L3 - juvenile #/specie value deleted

Dr. Allan Vogel
VTN OREGON, Inc.
8285 S.W. Nimbus Avenue, Suite 151
Beaverton, OR 97005

Dear Allan:

I have received your list of corrections to the zooplankton data. We will make the necessary corrections before the data are final processed. Since none of the incorrect records or the taxonomic code corrections appear to affect the retrieval of data for your product request, we will continue to work on the contour product for these data while the data are corrected for the archives.

I am forwarding a copy of your letter to our taxonomic code specialist for her review and comments.

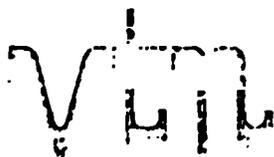

As I will be on leave until August 17, 1981, please contact Sid Halminski if you have any further questions concerning your request.

Sincerely yours,

Jim Audet

Mr. John J. Audet
Central Coordination and Referral Office
Environmental Data and Information Service
National Oceanographic Data Center
2001 Wisconsin Avenue, N.W.
Washington, D.C. 20235

Dear Jim,

Enclosed are our tape corrections and internal taxonomic code assignments as you requested on 2 July 1981. I have marked several species with an asterisk to indicate where I found taxonomic errors in our copy of the NODC taxonomic codes.

The genus Euchaeta (NODC Tax. Code = 61180801) is divided into two genera, Euchaeta and Pareuchaeta, although they were apparently lumped in the codes. The organism referred to as Euchaeta japonica (6118080128) is actually Pareuchaeta elongata (see Tanaka 1958 and Threlkeld 1973 for discussion of this taxonomic change), and so probably is synonymous with the Euchaeta elongata (6118080110) listed earlier in the NODC Taxonomic Code. It is my belief that, while the taxonomy of certain calanoid copepod genera is still being revised, euchaetid taxonomy has stabilized and the codes should be brought up to date.

The cladoceran section of the NODC Taxonomic Codes contains a considerable amount of outdated and incorrect taxonomy. While marine scientists collecting zooplankton in the open ocean see few specimens of this order, cladocerans are common inshore. Two coastal areas in which I have worked, the Columbia River Estuary and the fjords of southeastern and south central Alaska, provided me with a number of specimens requiring an extension and/or revision of the order as presented in the NODC Taxonomic Codes. I have enclosed a list of the codes as presented on our copy of the codes along with my comments, and a taxonomic listing based upon my knowledge of the order and the literature (major sources were John L. Brooks' chapter in Freshwater Biology, 2nd Edition, 1959, edited by W.T. Edmondson; his 1957 monograph of the systematics of North American Daphnia; and Devey and

Mr. John J. Zedler
July 14, 1981
Page Two

and Deevey's 1971 paper on American bosminids published in Limnology and Oceanography), plus my suggestions for a revision. I hope my comments will prove useful to you and your group.

Sincerely,

VIN OREGON, INC.

6109060101	<u>Leptodora kindtii</u> (8)

Annotations

- (1) I cannot comment on the taxonomy of this species as I have only seen citations from the European literature for it. I have not read any reports of its occurrence in the northeast Pacific between Oregon and the Bering Sea.
- (2) Several other genera of daphnids occur in fresh and brackish waters, one of which (Ceriodaphnia) I have collected on several occasions from Alaskan fjords. The species was C. reticulata.
- (3) Daphnia longispina is not found in North America. It occurs in Eurasia only (Brooks 1957).
- (4) Brooks (1957, 1959) lists 14 other species of Daphnia besides D. pulex found in North America, at least two of which I have found in either the Columbia River estuary or off Alaska.
- (5) This species is in the wrong family; the correct family is Macrothricidae, which was not in my copy of the NODC Taxonomic Codes.
- (6) Bosmina has been divided into two genera (Deevey and Deevey 1971), Eubosmina and Bosmina. The brackish-water subspecies, which I have collected off Alaska on several occasions, was assigned to the genus Eubosmina.
- (7) Leptodoridae is not in the suborder Eucladocera, but rather is the solitary family in the suborder Haplopoda.
- (8) Besides Macrothricidae, another family, Chydoridae, was not included; and at least two of its genera have been found in estuarine waters. I have observed one in the Alaskan fjords I've studied.

Order Cladocera

(After Brooks 1957, 1959; Deevey and Deevey 1971; Smirnov 1974. Species tallies are based upon North American information; collection notes based upon personal experience.)

Suborder Haplopoda (1 family, 1 genus)

F. Leptodoridae

Leptodora - 1 sp.

Suborder Eucladocera (3 superfamilies, 7 families, 47 genera)

Superfamily Polyphemoidea

F. Polyphemidae

Polyphemus - 1 sp.

Evadne - 3 spp. (2 collected from Alaskan waters)

Podon - 3 spp. (all 3 collected from Alaskan waters)

Superfamily Sidoidea

F. Holopedidae

Holopedium - 2 spp.

F. Sididae

Sida - 1 sp.

Latona - 2 spp.

Diaphanosoma - 2 spp.

Pseudosida - 1 sp.

Latonopsis - 2 spp.

Superfamily Chydoroidea

F. Bosminidae

Bosmina - 1 sp. (B. longirostris common in Oregon estuaries)

Eubosmina - 4 spp. (subspecies E. coregoni maritima collected from Alaskan waters)

Bosminopsis - 1 sp.

F. Daphnidae

Daphnia - 15 spp. in 2 subgenera

Order Cladocera
(continued)

Subgenus Ctenodaphnia	<u>D. magna</u>
	<u>D. similis</u>
Subgenus Daphnia	<u>D. ambigua</u>
	<u>D. catawba</u>
	<u>D. dubia</u>
	<u>D. galeata mendotae</u> (collected in the Columbia River Estuary)
	<u>D. laevis</u>
	<u>D. longiremis</u>
	<u>D. middendorffiana</u>
	<u>D. parvula</u>
	<u>D. pulex</u>
	<u>D. retrocurva</u>
	<u>D. rosea</u>
	<u>D. schodleri</u> (collected from Alaskan waters)
	<u>D. thorata</u> (may be another subspecies of <u>D. galeata</u> ; K. Patalas of Environment Canada (1974, J. Fish Res. Bd. Canada and personal communication) and I have found apparent inter- grades between <u>D. galeata</u> <u>mendotae</u> and <u>D. thorata</u> in the ELA, Ontario and in Lower Michigan, respectively.
<u>Ceriodaphnia</u> -	9 spp. (<u>C. reticulata</u> collected from Alaskan waters)
<u>Simocephalus</u> -	3 spp.
<u>Scapholeberis</u> -	2 spp.
<u>Moinodaphnia</u> -	1 sp.
<u>Moina</u> -	7 spp.

Order Cladocera

(continued)

F. Chydoridae (4 subfamilies, 3 found in North America)

Subfamily Eurycercinae

Eurycercus - 2 spp.

Subfamily Chydorinae

Chydorus - 11 spp. in four subgenera (1 found in
Columbia River Estuary)

Dadaya - 1 sp.

Alonella - 8 spp. in 3 subgenera

Durhevedia - 2 spp.

Pleuroxus - 9 spp.

Anchistropus - 1 sp.

Subfamily Aloninae

Alona - 11 spp. (1 found in Alaskan waters;
genus recorded from several Oregon
River estuaries including the
Columbia)

Alonopsis - 2 spp.

Acroperus - 1 sp.

Euryalona - 1 sp.

Rhynchotalona - 1 sp.

Monospilus - 1 sp.

Camptocercus - 3 spp.

Kurzia - 1 sp.

Graptoleberis - 1 sp.

Leydigia - 2 spp.

Oxyurella - 2 spp.

I. Macrothricidae

Ophryoxus - 1 sp.

Parophryoxus - 1 sp.

Streblocerus - 2 spp.

Drepanothrix - 1 sp.

Order Cladocera
(continued)

<u>Acantholebris</u> -	1 sp.
<u>Grimaldina</u> -	1 sp.
<u>Wlassicia</u> -	1 sp.
<u>Macrothrix</u> -	5 spp.
<u>Lathonura</u> -	1 sp.
<u>Bunops</u> -	1 sp.
<u>Ilyocryptus</u> -	3 spp.

Based upon what I know of the life histories, habitat preferences and salinity tolerances of these organisms, I would recommend the following rearrangements, corrections and additions to the present code.

6108	Branchiopoda Diplostraca Cladocera Haplopoda
610801	Leptodoridae
6108010101	<u>Leptodora kindtii</u>
6109	Branchiopoda Diplostraca Cladocera Eucladocera
610901	Sididae - no changes
610902	Daphnidae
61090201	<u>Daphnia</u>
6109020101-	
6109020115	List all 15 species and drop <u>D. longispina</u> (I suggest reassigning all such records to <u>Daphnia</u> sp.)
6109020201	<u>Simocephalus exspinosus</u>
6109020401	<u>Ceriodaphnia reticulata</u>
61090205	<u>Holina</u>
610903	Bosminidae
6109030101	<u>Bosmina longirostris</u>
6109030201	<u>Eubosmina coregoni</u>
610903020102	<u>Eubosmina coregoni maritima</u>
610904	<u>Holopedidae</u> - no changes
610905	<u>Polyphemidae</u> - no changes
610907	<u>Chydoridae</u>
61090701	<u>Chydorus</u>
61090702	<u>Alona</u>
6109070301	<u>Monospilus dispar</u>
61090704	<u>Leydigia</u>
610908	<u>Macrothricidae</u>
6109080101	<u>Ilyocryptus sordidus</u>
