**Predictive Services Discussion:** Upper-level troughing will continue over the Pacific Northwest and Northern Rockies, extending into northern California and the northern Great Basin. An associated cold front will move through Montana and push into the central Great Basin and Wyoming. High pressure will remain over the southern Plains with a deeper, moist south flow aloft developing over Arizona and the southern Great Basin. Ida will move through the Tennessee Valley into the Appalachians as a tropical depression. Widespread heavy rain will continue to occur along Ida's track in the Tennessee Valley into the central Appalachians. Elevated to critical fire weather conditions are expected in the Cascade gaps, portions of eastern Oregon, the Sierra, northern and central Great Basin, and into Wyoming, western Montana, and northwest Colorado. Dry and breezy conditions are also possible along eastern slopes and gaps in the Coast Ranges of California and across the northern High Plains. Moisture will increase across Arizona, southeast California, and the southern Great Basin, with scattered monsoonal thunderstorms likely in the afternoon, some with heavy rainfall and flash flooding. Isolated monsoonal thunderstorms are possible over the higher terrain of western New Mexico and the Colorado Rockies.

## Vehicle Entrapment

*Vehicles/Roads Category*

If you find yourself in a fire entrapment situation where a shelter deployment is not possible, using a vehicle for refuge may be an option. The following are some considerations for a vehicle entrapment:

- Park the vehicle in an area void of vegetation.
- Burn out around the vehicle if there is time.
- Park behind a natural barrier or structure. Consider that a structure could become involved which could severely impact nearby exposures/vehicles.
- Do not park on the downhill side of a road or under power lines or over-hanging vegetation.
- Stay out of saddles and draws.
- Position the vehicle in a direction that provides the area occupied by crew personnel the maximum protection from an approaching flame front.
- Set the parking brake, leave the motor running at high RPM, and keep the vehicle lights on.
- Roll up the windows and do not lock the doors since someone else might need to get in.
- Cover windows with fire shelters, placing reflective material against the window.
- You must protect your airway; remain as low in the vehicle as possible and use a dry bandana to cover your nose and mouth.
- Expect the following conditions if you are trapped inside the vehicle:
  - Temperatures may reach over 200 degrees Fahrenheit.
  - Smoke and sparks may enter the vehicle.
  - Plastic parts may start to melt and give off toxic gases.
  - Windows may start to crack.
  - Exposed skin may receive radiant heat burns.
- If the vehicle catches fire or windows blow out and you must exit the vehicle before the fire has passed, then:
  - Each crewmember should cover themselves with a fire shelter.
  - Exit the vehicle from the side away from the greatest heat.
  - Stay together and get as low to the ground as possible, moving away from the vehicle.
  - Deploy your shelter in a safe area.
