## **Predictive Services Discussion:**

Strong upper-level high pressure will slowly migrate into the Great Basin and central Rockies today, with well above normal temperatures, low afternoon relative humidity, and poor overnight recovery continuing for much of the West. Scattered mainly wet thunderstorms are likely in central Arizona to southern and western New Mexico, with isolated mixed wet and dry thunderstorms into northwest Arizona, southwest Utah, and east-central Nevada. The driest storms are likely to occur on the northwest fringe of the moisture in east-central Nevada. A weak upper low off the California coast will nudge closer to the coast with a slight chance of afternoon dry thunderstorms in the Cascades of far northern California and southern Oregon. In addition, thermal troughing will continue near the Cascades and enhance low-level instability. The cold front in the eastern US will slowly move into central Texas, the Lower Mississippi Valley, Ohio Valley, and Northeast with scattered to widespread showers and thunderstorms. The heaviest and most widespread rain is forecast for the Northeast and Mid-Atlantic.
