COMPARATIVE CLIMATIC DATA

**The Comparative Climatic Data publication is available at:
<http://www.ncdc.noaa.gov/data-access/quick-links#ccd>**

PDF and ASCII text data files are available for downloading at the above address.

A Google Earth Layer that displays locations for all of the Comparative Climatic Data (CCD) Stations is available on NCEI's Historical Observing Metadata Repository (HOMR) Website at <https://www.ncdc.noaa.gov/homr/reports> within the 'Other Networks' section under 'Miscellaneous Station Reports'. The direct link to the related Google Earth Layer is <https://www.ncdc.noaa.gov/homr/file/ccd-stations.kmz>.

For further information concerning weather and climate data contact the National Centers for Environmental Information at ncei.orders@noaa.gov or Telephone: (828) 271-4800, TDD 271-4010, FAX 271-4876

COMPARATIVE CLIMATIC DATA

These tables of meteorological elements provide a summary of the observed climatic conditions at selected weather observing stations in all 50 states, Puerto Rico, and Pacific Islands. These data are not intended for the analysis of climate variability and change. They are most useful for comparing general climate conditions of temperature, precipitation, winds, cloudiness, and sunshine between locations across the U.S. and its territories. With the exception of cloudiness and sunshine data, updates to these data are made annually. Updates to the cloudiness data in this publication ended with the transition to Automated Surface Observing Stations at National Weather Service (NWS) sites. In the 1990s cloud measurements taken by trained observers began to be replaced with measurements from automated sensors that detected the presence of clouds above the sensor to a height of 12,000 feet. Sunshine sensors began to be phased out at NWS sites in the 1990s. Monthly and annual climatic statistics were computed from period of record data in the National Centers for Environmental Information (NCEI) Global Historical Climatology Network-Daily data set (Menne et al. 2012). If any element has less than three years of data in the GHCD-Daily data set it was omitted from the publication.

Data for the 30-year official Climate Normals period (1981-2010) are also included in this publication.

Stations are listed alphabetically by state. The tables are arranged so that values of the same element can be compared for different locations by use of a single table. Some weather stations do not regularly report some elements and will, therefore, not be listed in the table for that element. Asterisks (*) denote average frequency of occurrence greater than zero, but smaller than one half.

I. Observed Data (Monthly and Annual) - These values are the means and extremes for the Period of Record (Abbreviated POR; number of years the station operated).

A. Temperature - Highest of Record, Degrees Fahrenheit (F)

B. Temperature - Lowest of Record, Degrees Fahrenheit (F)

The annual temperature entry for each station represents the highest or lowest observed temperature in any month.

C. Mean Number of Days with Minimum Temperature 32 Degrees F or less.

The mean number of days with a minimum temperature of 32 degrees F or lower indicates the frequency of occurrence of days with freezing temperatures.

D. Mean number of Days with Maximum Temperature 90 Degrees F or More
(70 Degrees F or higher for Alaska Stations)

E. Mean number of Days with Precipitation 0.01 Inches or More

This table shows mean number of days per month with at least 0.01 inch of liquid (or water equivalent of frozen precipitation). This is the smallest amount of precipitation numerically recorded.

F. Snowfall (including ICE PELLETS and SLEET) - Average Total in Inches.

G. Wind - Average Speed (MPH)

H. Wind - Maximum Speed (MPH)

This table expresses both a maximum wind speed for the stations and, where available, the direction from which it blew (referenced to true North). The reporting of maximum wind speed has changed through time. The maximum speed reported originates from either of three observed elements (Peak wind gust, fastest 5-second wind, and highest instantaneous wind speed). The element with the highest speed was used when more than one element was reported in the same month.

I. Sunshine - Percentage of Possible

The total time that sunshine reaches the observing station is expressed as the percentage of the maximum amount possible from sunrise to sunset in clear sky conditions. The NWS has phased out the sunshine sensor so most of the stations in this publication have periods of record that have ended.

J. Cloudiness - Mean Number of Days - Clear (CL), Partly Cloudy (PC), Cloudy (CD)

This table shows the mean number of days per category of cloudiness. The categories are determined for daylight hours only. Clear denotes zero to 3/10 average sky cover. Partly cloudy denotes 4/10 to 7/10 average sky cover. Cloudy denotes 8/10 to 10/10 average sky cover. Beginning with July 1996 sky coverage is reported to eighths (oktas). Clear indicates 0 - 2 oktas, partly cloudy indicates 3 - 6 oktas and cloudy indicates 7 - 8 oktas. The cloudiness data are unchanged from year to year. Updates to the cloudiness data ended with the transition to Automated Surface Observing Stations at National Weather Service (NWS) sites. In the 1990s cloud measurements taken by trained observers began to be phased out in favor of automated sensors that measured clouds below 12,000 feet.

K. Average Relative Humidity (percent) - Morning (M) and Afternoon (A)

The relative humidity is expressed as a percentage measure of the amount of moisture in the air compared to the maximum amount of moisture the air can hold at the same temperature and pressure. Average humidity values are given for morning and afternoon observations. Humidity is typically highest in the morning hours when air temperature is lowest. In this publication, the Local Standard Time (LST) of morning and afternoon humidities are shown below.

Atlantic, Alaska	(M morning 8 A.M.) (A afternoon 2 P.M.)
Eastern, Bering, 165W Meridian	(M morning 7 A.M.) (A afternoon 1 P.M.)
Central, 180E Meridian	(M morning 6 A.M.) (A afternoon NOON)
Mountain, 165E Meridian	(M morning 5 A.M.) (A afternoon 5 P.M.)
Pacific, 150E Meridian	(M morning 4 A.M.) (A afternoon 4 P.M.)
135E Meridian	(M morning 9 A.M.) (A afternoon 3 P.M.)

- II. Climatological Normals (Monthly and Annual) - these are the 30-year average values computed from the data recorded during the period 1981-2010. Climate Normals are updated decennially. If an instruments exposure was changed, mathematical adjustments are made to make the data representative of the current location. The values are statistically determined and cannot be recreated solely from the original record.
- A. Normal Daily Maximum Temperature, Degrees F
 - B. Normal Daily Minimum Temperature, Degrees F.
 - C. Normal Daily Mean (Average) Temperature, Degrees F.
 - D. Normal Heating Degree Days (July-June)
 - E. Normal Cooling Degree Days (January-December)
Degree day data are used to estimate amounts of energy required to maintain comfortable indoor temperature levels. Daily values are computed from each days mean temperature (max + min/2). Each degree that a day's mean temperature is below or above 65 degrees Fahrenheit is counted as one heating or cooling degree day.
 - F. Normal Precipitation, Inches
The normal precipitation is the arithmetic mean for each month over the 30-year period including liquid water equivalent of frozen precipitation.

Other types of weather and climate data may be obtained from the National Centers for Environmental Information by visiting <http://www.ncei.noaa.gov> or by calling 828-271-4800, 828-271-4010 TDD, 828-271-4876-FAX.

TABLES

OBSERVED DATA

PAGE

7 TEMPERATURE - HIGHEST OF RECORD, DEGREES F
15 TEMPERATURE - LOWEST OF RECORD, DEGREES F
23 MEAN NUMBER OF DAYS MINIMUM TEMPERATURE 32 DEG. F OR LESS
31 MEAN NUMBER OF DAYS MAXIMUM TEMPERATURE 90 DEG. F OR MORE
39 MEAN NUMBER OF DAYS WITH PRECIPITATION 0.01 INCH OR MORE
47 SNOWFALL (INCLUDING ICE PELLETS) - AVERAGE TOTAL IN INCHES
55 WIND - AVERAGE SPEED (MPH)
63 WIND - MAXIMUM SPEED (MPH)
70 SUNSHINE - AVERAGE PERCENT OF POSSIBLE
75 CLOUDINESS - MEAN NUMBER OF DAYS (CLEAR, PARTLY CLOUDY, CLOUDY)
82 AVERAGE RELATIVE HUMIDITY - MORNING (M), AFTERNOON (A)

CLIMATOLOGICAL NORMALS

90 NORMAL DAILY MAXIMUM TEMPERATURE, DEGREES F
98 NORMAL DAILY MINIMUM TEMPERATURE, DEGREES F
106 NORMAL DAILY MEAN TEMPERATURE, DEGREES F
114 NORMAL HEATING DEGREE DAYS (JULY-JUNE) BASE 65 DEGREES F
122 NORMAL COOLING DEGREE DAYS (JAN-DEC) BASE 65 DEGREES F
130 NORMAL PRECIPITATION, INCHES
138 NORMAL SNOWFALL, INCHES
144 STATION INDEX
